

# The Green Seas LTD

## FULL SHIP SERVICES

The Green Seas LTD now offers washing services for naval cargo holds, 24h a day, 7 days a week. Presuming good access to fresh water, electricity and lifting services (crane), our team can achieve a washing speed of 700 sqm/h.

This performance is achieved using the following equipment :

- 1 motor-pump - 900bar
- 6 electro-pumps - 250bar
- 1 high temperature electro-pump - 200bar 130 °C

For discharging the residual water from the cargo holds we use:

- 2 motor pumps - 5HP
- 1 motor pump - 9HP
- 2 membrane air pressure pumps
- 1 submersible electric pump

For our electricity need we can either use the onboard supply , with the help of our 440v - 380v transformers and we can also operate completely independent of other sources by using our diesel generators.

We also mention that for washing the cargo holds, depending on the type of cleaning needed, we prefer using biodegradable detergents.

For more information and details regarding our other services please visit our webpage <http://www.greenseas.ro/>
